ABSTRACT

PURPOSE: To obtain the title composition having excellent extensibility and appearance, high coating and level dyeing properties without sagging, by blending a higher fatty acid and polyoxyethylene alkyl phenyl ether in a hair dye containing an oxidation dye intermediate and alkaline agent.

CONSTITUTION: The title composition obtained by blending a higher fatty acid (especially preferably oleic acid, isostearic acid, linoleic acid, linolenic acid, ricinoleic acid, sorbic acid or undecylenic acid, in an amount of 2-20wt.%) and a polyoxyethylene alkyl phenyl ether (especially preferably polyoxyethylene octyl phenyl ether, polyoxyethylene nonyl phenyl ether or polyoxyethylene dodecyl phenyl ether, in an amount of 5-50wt.%) in a hair dye composition containing an oxidation dye intermediate and an alkaline agent. The viscosity of the composition is preferably within the range of 1500-25000cP measured by using a Brookfield type viscometer.
